

ACTIVITY 13

Global Tech Ambassador & Open-Source Pathway Selection

Name	Shrihari H Desai
SRN	R25EJ140
University	REVA University
Degree / Branch	B.Tech Computer Science and Information Technology
Activity	Global Tech Ambassador & Open-Source Pathway Selection

1. Program Selection

The two pathways selected are **GitHub Campus Experts** and **HackerRank Campus Crew**. They align with my current technical direction in GitHub-based projects, programming, DSA, hackathons, and the goal of developing stronger technical-community leadership.

2. Comparative Program Analysis

Criteria	GitHub Campus Experts	HackerRank Campus Crew
Focus	Build and grow student technical communities; leadership, meetups, hackathons and open-source activity.	Student coding community; workshops, hackathons, coding challenges and interview-prep sessions.
Eligibility	18+; formal higher-education student; GitHub user for 6+ months; more than 1 year before graduation; student-status validation.	Currently enrolled college/university student interested in coding and community.
Application cycle	Applications open every July for one month. The September 2026 submission window is therefore closed; next cycle should be checked on the official page.	Current official page provides an Apply Now flow; no fixed annual deadline is stated on the current page.
Selection / process	Application form followed by a video resume; GitHub reviews motivation, growth and campus contribution.	Application → short coding challenge → interview → campus ambassador selection.
Benefits	Training, mentorship and support for building a technical community.	Mentorship, certificate/experience visibility, exclusive resources/events, swag and career-related perks.
Fit with my profile	Good fit because of my GitHub/project activity; open-source and community leadership need strengthening.	Good fit because of my C++/DSA, HackerRank and hackathon activity; community-event experience needs strengthening.

Current-source note: Eligibility and application-process details were checked against the official GitHub Campus Experts and HackerRank Campus Crew pages on 29 September 2026. The assignment brief's approximate February 2027 GitHub cycle was not used because GitHub's current documentation states that applications open every July for one month.

3. Readiness Assessment & Gap Analysis

My current profile has a solid technical/project foundation, including C/C++, Python, SQL, DSA, Git/GitHub, data/ML work, computer-vision projects and hackathon participation. The main development areas are collaborative open-source contribution, public technical writing and documented community leadership.

Area	Current readiness	Gap / action
Programming & DSA	Strong foundation in C/C++, DSA and coding practice.	Continue consistent problem solving and prepare for coding assessments.
GitHub / projects	Active GitHub portfolio with multiple technical projects.	Improve README quality, project documentation and collaboration evidence.
Open source	Personal project experience is stronger than external contributions.	Make 1–2 meaningful contributions to suitable open-source repositories.
Technical writing	Project documentation exists, but public technical writing can be expanded.	Publish a technical post explaining a real project, challenge and solution.
Community leadership	Hackathon and technical activity participation provides a base.	Conduct or assist with a coding/DSA session and document the activity.

4. Four-Week Preparation Roadmap

Week	Action plan	Evidence / output
1	Refresh GitHub profile; improve key README files; identify a suitable beginner-friendly open-source issue; make the first meaningful contribution.	Updated GitHub profile + first PR/issue contribution.
2	Write and publish one technical article/post; document one major project with architecture, challenges and lessons learned.	Technical article + improved project documentation.
3	Conduct or assist with a coding/DSA learning session for peers; share resources and collect basic feedback.	Event/session record + shared learning material.
4	Prepare program-specific responses; refine resume, GitHub and portfolio; rehearse project and community examples.	Application-ready profile + motivation responses.

5. Drafted Technical Community Motivation

I want to participate in a student technology community because I have experienced how much faster technical learning becomes when students share problems, projects and practical resources with one another. My current learning path combines C and C++, data structures and algorithms, Python, Git and GitHub, data/ML work, computer-vision projects and hackathons. Building projects has taught me that technical skill is not only about writing code; it is also about explaining decisions, collaborating and helping others solve problems. Through a community ambassador pathway, I want to turn that learning into something useful for my peers. I would like to organize beginner-friendly coding and DSA sessions, share project-building resources, encourage students to participate in hackathons and open-source work, and document practical lessons from my own projects. At the same time, I want to strengthen my own open-source contribution, communication and leadership skills. GitHub Campus Experts and HackerRank Campus Crew both provide a structured environment for these goals, although their emphasis differs: GitHub is closely connected with technical community building and open source, while HackerRank focuses strongly on coding activities and student developer engagement. My goal is to contribute consistently rather than simply hold a title, and to help create a campus environment where more students feel comfortable starting with coding, building projects and participating in technology communities.
