

ACTIVITY 6

LeetCode Practice & Portfolio Integration

Name	Shrihari H Desai
SRN	R25EJ140
Program	B.Tech – CSIT
Semester	3rd Semester

LEETCODE PROFILE

https://leetcode.com/u/Shrihari_79/

GITHUB REPOSITORY

https://github.com/shriharidesai209-commits/Leet_Code

PROBLEMS COMPLETED

No.	Problem	Topic
1	Two Sum	Arrays & Strings
2	Reverse a String	Arrays & Strings
3	Valid Anagram	Arrays & Strings
4	Best Time to Buy and Sell Stock	Arrays & Strings
5	Longest Common Prefix	Arrays & Strings
6	Binary Search	Basic Algorithms
7	Move Zeroes	Basic Algorithms
8	Valid Parentheses	Stacks

PORTFOLIO COMPONENTS

Component	Status
8 LeetCode solutions	Completed
Local test cases	Completed
Per-problem documentation	Completed
Accepted-result screenshots	Completed
PROGRESS.md tracker	Completed
Root README.md	Completed

Note: This PDF is prepared as an additional portfolio/record artifact for Activity 6. The provided Activity 6 sheet lists the GitHub repository and its contents as the formal deliverables.

REFLECTIVE SUMMARY

LeetCode Practice & Portfolio Integration

This activity helped me develop consistent problem-solving skills through practical LeetCode practice. I solved problems covering arrays, strings, basic algorithms, searching, and other fundamental data-structure concepts using C. Writing the solutions locally before submitting them helped me understand the importance of testing rather than relying only on an online judge. I also practiced using typical and edge cases to verify correctness and identify possible boundary conditions. Another important learning outcome was understanding algorithmic efficiency through time and space complexity analysis. Problems such as Two Sum and Valid Anagram showed how suitable data structures can reduce unnecessary repeated work, while Binary Search demonstrated how an efficient search strategy can improve performance. Maintaining per-problem documentation with the approach, complexity, and notes also helped me present my work in a way that can be understood by someone reviewing the repository. The GitHub repository acts as a record of my progress and provides evidence of my coding practice. Overall, this activity improved my confidence in solving programming problems, testing C implementations, analyzing efficiency, and maintaining a structured technical portfolio. It also encouraged me to build a habit of recording progress over time, which can help me track improvement and prepare for future technical interviews and placement-oriented coding practice.
